

IN THE SPECIFICATION:

Please amend the specification as follows:

Replace the abstract with:

The present invention relates to a method and apparatus for determining a head position of a vehicle driver that has non-limiting advantages of enhanced accuracy and/or precision without excessive increase of manufacturing cost of the vehicle. A vehicle is provided with at least one of a left rearview mirror and a right rearview mirror, a head position of a vehicle driver may be determined on the basis of at least one of vertical and horizontal inclination angles of the at least one rearview mirror.
